Linear regression

Aim:

To implement linear regression supervised machine learning algorithm .

Description:

1. Import stats for Linear regression through scipy
2. Provide a necessary dataset through Excel file
3. Finally we can obtain the linear regression output through matplotlib as

graph Program:

```
import matplotlib.pyplot as plt from scipy
import stats
import pandas

df=pandas.read_excel(" Linear data (1).xlsx" )

print (" \n Original Dataframe\n" , df) slope,intercept,r,p,std_err=stats.linregress(df[
" x" ],df[" y" ]) def myfunc(x):
    return slope*x+intercept
mymodel=list(map(myfunc,df[" x" ]))
plt.scatter(df[" x" ],df[" y" ]) plt.
plot(df[" x" ],mymodel)
plt.show()
```

Output :

Original Dataframe

X y

5 81

6 82

7 83

8 84

9 85

10 86

11 87

12 88

13 89

14 90

Result:

The programs were run successfully
